$$\text{Factorize } H(z) = \frac{B(z)}{A(z)} = \frac{b[0] \prod_{i=1}^M (1 - q_i z^{-1})}{\prod_{i=1}^N (1 - p_i z^{-1})}$$

Roots of $A(z)$ and $B(z)$ are the “poles” $\{p_i\}$ and “zeros” $\{q_i\}$ of $H(z)$

Also an additional $N - M$ zeros at the origin (affect phase only)

$$|H(e^{j\omega})| = \frac{|b[0]| |z^{-M}| \prod_{i=1}^M |z - q_i|}{|z^{-N}| \prod_{i=1}^N |z - p_i|} \text{ for } z = e^{j\omega}$$

Example:

$$H(z) = \frac{2 + 2.4z^{-1}}{1 - 0.96z^{-1} + 0.64z^{-2}} = \frac{2(1 + 1.2z^{-1})}{(1 - (0.48 - 0.64j)z^{-1})(1 - (0.48 + 0.64j)z^{-1})}$$

$$\text{At } \omega = 1.3: |H(e^{j\omega})| = \frac{2 \times 1.76}{1.62 \times 0.39}$$

Group Delay Question

- ① Identify parameters p and q in the filter, $h[n] = pq^n u[n]$ given that $h[1] = 1$ and the group delay at $\omega = \pi$ is $-1/3$.

Group Delay Question

- ① Identify parameters p and q in the filter, $h[n] = pq^n u[n]$ given that $h[1] = 1$ and the group delay at $\omega = \pi$ is $-1/3$.

Since $h[1] = 1$, clearly, $pq = 1$.

Group Delay Question

- ① Identify parameters p and q in the filter, $h[n] = pq^n u[n]$ given that $h[1] = 1$ and the group delay at $\omega = \pi$ is $-1/3$.

Since $h[1] = 1$, clearly, $pq = 1$.

Further, group delay at $\omega_0 = \pi$ is $-1/3$. To make use of this, we first note that the z-transform of $pq^n u[n]$ is,

$$H(z) = \frac{p}{1 - qz^{-1}}.$$

Group Delay Question

- Identify parameters p and q in the filter, $h[n] = pq^n u[n]$ given that $h[1] = 1$ and the group delay at $\omega = \pi$ is $-1/3$.

Since $h[1] = 1$, clearly, $pq = 1$.

Further, group delay at $\omega_0 = \pi$ is $-1/3$. To make use of this, we first note that the z-transform of $pq^n u[n]$ is,

$$H(z) = \frac{p}{1 - qz^{-1}}.$$

According to the definition of the group delay,

$$\tau_H = \operatorname{Re} \left(-\frac{z}{H(z)} \partial_z H(z) \right) \text{ at } z = e^{j\omega}$$

and in the above (using derivative chain rule),

$$\partial_z H(z) = -\frac{pq}{(1 - qz^{-1})^2 z^2} \xrightarrow{\text{Simplification}} -\frac{z}{H(z)} \partial_z H(z) = \frac{q}{z - q}.$$

Group Delay Question

- Identify parameters p and q in the filter, $h[n] = pq^n u[n]$ given that $h[1] = 1$ and the group delay at $\omega = \pi$ is $-1/3$.

Since $h[1] = 1$, clearly, $pq = 1$.

Further, group delay at $\omega_0 = \pi$ is $-1/3$. To make use of this, we first note that the z-transform of $pq^n u[n]$ is,

$$H(z) = \frac{p}{1 - qz^{-1}}.$$

According to the definition of the group delay,

$$\tau_H = \operatorname{Re} \left(-\frac{z}{H(z)} \partial_z H(z) \right) \text{ at } z = e^{j\omega}$$

and in the above (using derivative chain rule),

$$\partial_z H(z) = -\frac{pq}{(1 - qz^{-1})^2 z^2} \xrightarrow{\text{Simplification}} -\frac{z}{H(z)} \partial_z H(z) = \frac{q}{z - q}.$$

Finally, the group delay simplifies to,

$$\tau_H(\omega) = \operatorname{Re} \left(\frac{q}{e^{j\omega} - q} \right) = \frac{q \cos(\omega) - q^2}{1 + q^2 - 2q \cos(\omega)}.$$

Group Delay Question

- Identify parameters p and q in the filter, $h[n] = pq^n u[n]$ given that $h[1] = 1$ and the group delay at $\omega = \pi$ is $-1/3$.

Since $h[1] = 1$, clearly, $pq = 1$.

Further, group delay at $\omega_0 = \pi$ is $-1/3$. To make use of this, we first note that the z-transform of $pq^n u[n]$ is,

$$H(z) = \frac{p}{1 - qz^{-1}}.$$

According to the definition of the group delay,

$$\tau_H = \operatorname{Re} \left(-\frac{z}{H(z)} \partial_z H(z) \right) \text{ at } z = e^{j\omega}$$

and in the above (using derivative chain rule),

$$\partial_z H(z) = -\frac{pq}{(1 - qz^{-1})^2 z^2} \xrightarrow{\text{Simplification}} -\frac{z}{H(z)} \partial_z H(z) = \frac{q}{z - q}.$$

Finally, the group delay simplifies to,

$$\tau_H(\omega) = \operatorname{Re} \left(\frac{q}{e^{j\omega} - q} \right) = \frac{q \cos(\omega) - q^2}{1 + q^2 - 2q \cos(\omega)}.$$

We are given, $\tau_H(\pi) = -\frac{1}{3}$. We use this equation to solve for q ,

$$\tau_H(\pi) = -\frac{q}{1 + q} = -\frac{1}{3} \Rightarrow q = \frac{1}{2}.$$

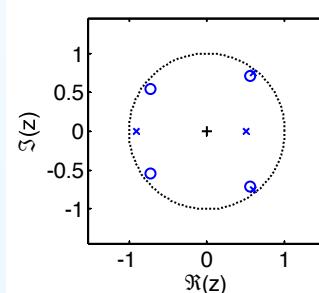

Hence, $p = 2$.
